

Using Pod Download

To use Pod Download it needs to be installed on the computer to be used. The latest version will be on any supplied CD and is also available from the downloads page at www.ikonavs.com.

Installation

Double click on **PodDownload.msi** and follow the instructions. When finished Pod Download will be installed and ready for use.

Connect to the Podule

On most Podules this will be using a straight wired 9pin D – 9pin D cable (or USB to serial converter). For the Wall Pod 8 and 16 please refer to the individual data sheets for programming connections.

Programming

Once connected to the Podule and powered locate the *.PEX file to be uploaded and double click on it. This will open Pod Download and search the available serial ports to find a compatible Podule. Click the radio button next to the Pod you wish to program.

Alternatively you can open Pod Download from START \ All Programs \ Ikon AVS \ Pod Download. Once running click on LOAD and browse for the .PEX file then continue as above.
